SUMMARY

I am a Full-Stack & Cloud Engineer with 4.5+ years of experience building and scaling high-load systems across FinTech, Cybersecurity, HealthTech, and Logistics. My core stack spans TypeScript/Node.js, Python, and React/Next.js, backed by strong Cloud-Native/DevOps expertise in AWS, GCP, Terraform, and CI/CD. I specialize in microservices refactoring (boosting throughput by up to 150%), serverless migrations, complex integrations (KYC, AI/LLM), and database optimization to improve reliability while cutting infrastructure costs.

SKILLS

Languages: TypeScript, JavaScript, Python.
Backend & Architecture: Node.js, NestJS, Django, Microservices, Serverless, GraphQL (Apollo), Moleculer, tRPC.
Cloud & DevOps: AWS (Lambda, API Gateway, S3, DynamoDB, Cognito, SQS, RDS, EC2), GCP (Cloud Functions, Cloud Run, Pub/Sub), Kubernetes, Terraform, CloudFormation, Docker, CI/CD (Jenkins), Grafana.
Databases & ORM: PostgreSQL, MySQL, MongoDB, Redis, Firestore, Prisma, TypeORM, Query Optimization.
Messaging & Protocols: NATS, RabbitMQ, gRPC.
Testing & Tooling: Jest, Mocha, Puppeteer.
Integrations & AI: OpenAI API, SumSub KYC / Identity Verification, Enterprise SaaS Integrations.
Frontend: React, Next.js.

EDUCATION

Zaporizhzhia National University

2017 - 2021

Bachelor's degree in Software Engineering

EXPERIENCE

Backend Developer / DevOps

January 2026 – Present

Enterprise Data Protection Platform

A cloud-based enterprise platform designed for file security analysis, malware detection, and data loss prevention (DLP).

Responsibilities:

- Improved backend service quality by expanding automated test coverage with Jest, reducing regression risks.
- Strengthened application security posture by managing dependencies and remediating identified vulnerabilities.
- Validated 10+ third-party SaaS integrations following system and dependency upgrades to maintain business continuity.
- Contributed to rolling out Grafana-based monitoring and observability solutions to improve visibility into system health and performance.
- Utilized Jenkins CI/CD pipelines to support testing, deployment, and release processes.

Technologies: TypeScript, JavaScript, Node.js, Kubernetes, Jest, Jenkins, Docker, Docker-compose, Grafana

Backend Developer
March 2025 – June 2025

Change Management System for Universities

A management and tracking platform designed to streamline change processes and administrative workflows within university environments.

Responsibilities:

- Configured and documented microservices environments to enable convenient local testing, reducing the need to interrupt other developers and speeding up onboarding.
- Refactored all microservices to follow a unified configuration pattern, eliminating merge conflicts and simplifying the creation of new microservices via templates.
- Implemented new security features requested by a key investor, enabling successful onboarding of investment into the project.

Technologies: TypeScript, NestJS, Redis, Docker, Docker-compose, gRPC, NATS

Backend Developer
May 2024 – September 2024

Patient Records Management System

A healthcare platform dedicated to storing, processing, and managing confidential patient record information.

Responsibilities:

- Delivered new features in strict compliance with the client's grant application requirements.
- Refactored existing legacy features under tight deadlines to support upcoming architecture extensions.
- Produced concise yet sufficient documentation to accelerate feature delivery across rotating project teams.

Technologies: AWS (Lambda, API Gateway, DynamoDB, S3, Cognito), Terraform, TypeScript, JavaScript, Zod, Puppeteer

Backend Developer
April 2024 – September 2024

Dating application

A social dating platform focused on preference collection and intelligent user matching algorithms.

Responsibilities:

- Engineered complex PostgreSQL functions to compute matching metrics between platform users.
- Developed feature sets for gathering, storing, and managing user preferences to deliver relevant matches based on shared interests.
- Built a photo upload and automated image analysis pipeline leveraging GCP services and image recognition tools.

Technologies: Node.js, NestJS, PostgreSQL, Redis, GCP (Pub/Sub, Cloud Functions), Firebase, Firestore, NATS, TypeScript

Full-Stack Developer
November 2023 – July 2024 & November 2024 – January 2025

A deployment tool for a cryptocurrency exchange and trading platform

Infrastructure and deployment toolset supporting high-frequency cryptocurrency exchange and trading systems.

Responsibilities:

- Integrated SumSub KYC verification services alongside a custom partner KYC solution.
- Refactored microservices to align with updated architectural standards, improving request processing throughput by 30% to 150%.
- Developed an administrative dashboard using React, featuring data tables, modal forms, and reusable components for platform setting management, data filtering, and pagination.
- Integrated the UI with backend API services via GraphQL to enable real-time data fetching, updates, and management workflows.
- Identified and resolved long-standing intermittent system bugs and race conditions.

Technologies: Node.js, TypeScript, JavaScript, React, GraphQL, Apollo GQL, Moleculer, MySQL, NATS, Docker, Docker-compose, SumSub KYC

Full-Stack Developer
September 2023 – October 2023 & March 2024 – June 2024

Furniture Configuration System

An interactive e-commerce configuration system allowing customers to customize domain-specific furniture models and specifications.

Responsibilities:

- Designed and built complex domain-specific backend entities based on unique client business constraints.
- Built dynamic React UI interfaces, complex multi-step forms, and reusable components with end-to-end validation and state management.
- Implemented end-to-end template management features, allowing users to create, edit, and apply reusable configurations for downstream calculations.
- Integrated frontend with backend services via tRPC, ensuring end-to-end type-safe data fetching, creation, and state updates.
- Resolved critical system architecture flaws on short notice and streamlined legacy code onboarding for new developers.

Technologies: Node.js, TypeScript, Next.js, React, tRPC, Prisma, PostgreSQL, Zod, Vercel.

Backend Developer
February 2023 – March 2023

Financial expertise application

An analytical platform that aggregates stock market expert opinions and generates insights using generative AI.

Responsibilities:

- Architected and implemented a serverless web-scraping system using AWS Lambda to collect expert stock opinions, significantly cutting server and proxy expenses.
- Successfully extracted restricted user-only data, saving the client ~$150 per account by mitigating block risks.
- Integrated the OpenAI API to analyze collected market data and generate platform content, helping attract a new user audience.

Technologies: Node.js, AWS (Lambda, API Gateway, DynamoDB), Serverless Framework, CloudFormation, OpenAI API, Puppeteer, SumSub KYC, JavaScript, TypeScript

Backend Developer

September 2021 – January 2023

Delivery application

A logistics and delivery management system designed to coordinate routing, driver assignments, and shipment tracking.

Responsibilities:

- Analyzed legacy Python/Django endpoints and migrated core functionality to AWS Serverless architecture.
- Designed and provisioned automated infrastructure from scratch using Terraform.
- Wrote raw, optimized database queries without ORM layers to maximize database performance.
- Designed database schemas, managed epics from initiation to release, conducted client demos, defined presale requirements, and mentored junior developers.

Technologies: AWS (Lambda, SQS, EventBridge, RDS, API Gateway, EC2), Terraform, Python, Django, Node.js, PostgreSQL, JavaScript, Mocha
